When a 1+ or 0+900+NXX+XXXX call is originated by an end user, the Telephone Company will perform the customer identification function to determine the customer location to which the call is to be routed. The customer identification function will be available at suitably equipped end offices or access tandem switches. If a call originates from an end office switch not equipped to provide the customer identification function, the call will be routed to an access tandem, where the customer identification will be performed and the call routed to the customer based on the NXX.

BellSouth SWA 900 service will be provisioned in accordance with the technical (D) characteristics available with BellSouth SWA FGD or BellSouth SWA TSBSA 3, except when more than one access tandem is employed in the transport of a BellSouth SWA 900 service call for which standard transmission characteristics are not guaranteed. (D)

Additionally, BellSouth SWA 900 service usage measurement shall be in accordance with the regulations set forth in Section 6.7.8 for BellSouth SWA FGD or BellSouth SWA TSBSA 3. (T) (D) (D) (D)

6.2 Provision and Description of BellSouth SWA Service Arrangements (Cont'd)

6.2.6 BellSouth SWA 900 Service (Cont'd)

Unless prohibited by technical limitations of the customer's terminating switch (e.g., different dialing plans), the customer's BellSouth SWA 900 service traffic may, at the option of the customer, be combined in the same trunk group arrangement with the customer's non-BellSouth SWA 900 service traffic. When required by technical limitations, or at the request of the customer, a separate trunk group will be established for BellSouth SWA 900 service. BellSouth SWA 900 service calls originated as 0-, 101XXXX, coin sent-paid capability, or originated from Inmate Service, and toll restricted stations will be blocked.

BellSouth SWA 900 service originating from end offices with the customer identification function will be provided using BellSouth SWA FGD or BellSouth SWA TSBSA 3 signaling with overlap outpulsing. BellSouth SWA FGD or BellSouth SWA TSBSA 3 signaling may be provided with or without 10-digit ANI, but not in the same trunk group. BellSouth SWA 900 service originating from end offices without the customer identification function will be provided using traditional signaling. (C) (C) (C)

For BellSouth SWA 900 service traffic originating from an end office with the customer identification function, BellSouth SWA FGD or BellSouth SWA TSBSA 3 parameters as specified in Sections 6.2.4 and 6.2.8.3 apply. (C) (T)

The Telephone Company retains the right to administer its network in such a manner that will minimize the impact of traffic surges in BellSouth SWA 900 service traffic on other access service traffic. Section 6.3.2(A)(12) notwithstanding, the Telephone Company may, when it deems necessary, implement network management controls to ensure acceptable service levels.

6.2.9 BellSouth SWA 500 Service (Cont'd)

When a 1+ or 0+500+NXX+XXXX call is originated by an end user, the Telephone Company will perform the customer identification function, based on the first six digits of the dialed 500 Number to determine the customer location to which the call is to be routed. After the customer identification function is performed, the call will be routed to the customer over originating BellSouth SWA FGD or BellSouth SWA TSBSA 3, or in accordance with the technical characteristics of BellSouth SWA FGD or BellSouth SWA TSBSA 3.

The manner in which BellSouth SWA 500 service is provided is dependent on the status of the end office from which the service is provided as outlined following:

- (1) When a 500 call originates from an end office equipped with Service Switching Point (SSP) customer identification capabilities, BellSouth SWA 500 service will be provisioned in accordance with the technical characteristics available with BellSouth SWA FGD or BellSouth SWA TSBSA 3 via a database look-up at the SCP. (C)
- (2) When a 500 call originates from an end office without SSP customer identification capabilities, the end office will perform the customer identification function via NXX translations. The 500 traffic is then delivered to the customer via BellSouth SWA FGD or BellSouth SWA TSBSA 3. (C)
- (3) When a 500 call originates from an end office in which that end office's normal call recording function is performed at the tandem on which the end office is homed, and that tandem is also equipped with the capability to perform a NXX translation, the 500 call will be delivered to the tandem for call routing and customer identification. The 500 call will be delivered via BellSouth SWA FGD or BellSouth SWA TSBSA 3, or in accordance with the technical characteristics of BellSouth SWA FGD or BellSouth SWA TSBSA 3. (C)
- (4) When a 500 call originates from an end office in which that end office's normal call recording function is performed at a location other than a tandem equipped with the capability to perform a NXX translation, the 500 call will be delivered to a tandem capable of performing a NXX (C)

Such service will be provided in conjunction with BellSouth SWA FGD or BellSouth SWA TSBSA 3 access from the access tandem capable of performing a NXX translation to the customer, except when more than one tandem is employed in the transport of a BellSouth SWA 500 service call for which standard transmission characteristics are not guaranteed. BellSouth SWA 500 service will be provisioned in conjunction with BellSouth SWA FGD and BellSouth SWA TSBSA 3 access, with two exceptions (i.e., design blocking criteria and ANI information digits).

The design blocking criteria for BellSouth SWA 500 service is set forth in Section 6.5.7(D). (D) (T)

Unless prohibited by technical limitations of the customer's terminating switch (such as different dialing plans or restrictions in the ability to identify various combinations of ANI information, i.e., 3 digit versus 10 digit ANI on certain calls) the customer's BellSouth SWA 500 service traffic may, at the option of the customer be combined in the same trunk group arrangement with the customer's non-BellSouth SWA 500 service traffic. When required by technical limitations, or at the request of the customer, a separate trunk group will be established for BellSouth SWA 500 service. 0- calling arrangements are not available with BellSouth SWA 500 service.

6.3 Local Switching Optional Features (Cont'd)

6.3.4 Common Switching Optional Features for Use with WATS (a.k.a. BellSouth SPA WATS Line) Access Line (BellSouth SWA FG and BellSouth SWA Basic Serving Arrangement Customers)

(A) These Optional Features are available to BellSouth SWA FG and BellSouth SWA Basic Serving Arrangement customers as specified in the descriptions) at no additional charge.

(1) Band Advance Arrangement for Use with WATS Access Lines (a.k.a. BellSouth SPA WATS Line)

This option, which is provided in association with two or more WATS Access Line (a.k.a. BellSouth SPA WATS Line) groups, provides for the automatic overflow of terminating calls to a WATS Access Line (a.k.a. BellSouth SPA WATS Line) group, when that group has exceeded its call capacity, to another WATS Access Line (a.k.a. BellSouth SPA WATS Line) group with a band designation equal to or greater than that of the overflowing WATS Access Line (a.k.a. BellSouth SPA WATS Line) group. This arrangement does not provide for call overflow from a group with a higher band designation to one with a lower one. This option is available with BellSouth SWA FGA, BellSouth SWA FGB, BellSouth SWA FGD, BellSouth SWA LSBSA, and BellSouth SWA TSBSA.

(2) End Office End User Line Service Screening for Use with WATS Access Lines (a.k.a. BellSouth SPA WATS Line)

This arrangement provides the ability to verify that an end user has dialed a called party address (by screening the called NPA and/or NXX) which is in accordance with that end user's agreement with the customer, e.g., WATS (a.k.a. BellSouth SWA WATS). This arrangement is provided in all Telephone Company end offices where technically capable. This arrangement is also provided, where available, to providers of WATS (a.k.a. BellSouth SWA WATS) in electromechanical in which WATS Access Lines (a.k.a. BellSouth SPA WATS Line) are provided. All blocked calls will be routed to announcement recording. It is available with BellSouth SWA FGA, BellSouth SWA FGB, BellSouth SWA FGD, BellSouth SWA LSBSA, and BellSouth SWA TSBSA.

6.5 Obligations of the Telephone Company (Cont'd)

6.5.7 Design Blocking Probability (Cont'd)

- (B) For BellSouth SWA FGB and BellSouth SWA TSBSA 1, the design blocking objective will be no greater than one percent (.01) between the point of termination at the customer's premises and the first point of switching. Standard traffic engineering methods will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.
- (C) For BellSouth SWA FGD and BellSouth SWA TSBSA 3, the design blocking objective for the final group will be no greater than one percent (.01) between the point of termination at the customer's premises and the end office switch, whether the traffic is directly routed without an alternate route or routed via an access tandem. Standard traffic engineering methods as set forth in reference document Technical Reference SR TAP-000191 Trunk Traffic Engineering Concepts and Applications will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.
- (D) The design blocking criteria for BellSouth SWA 500 service, BellSouth SWA 8XX Toll Free Dialing Ten Digit Screening Service or BellSouth SWA 900 service will be equivalent to that set forth, preceding, for BellSouth SWA FGD and BellSouth SWA TSBSA 3, except when more than one tandem is employed in the transport of a BellSouth SWA 500 service, BellSouth SWA 8XX Toll Free Dialing Ten Digit Screening Service or a BellSouth SWA 900 service call. In the event of a BellSouth SWA 900 service media stimulated call, the design blocking objective of no greater than one percent (.01) will not be guaranteed. (D)
