(T)

4. Primary Rate B Channels - will provide a usage sensitive circuit switched service that will allow either voice or data transmission at up to 64 Kbps.

a. Monthly rates for Primary Rate B Channels will be billed for local exchange service in accordance with Network Access Service (NAS) rates and charges found in Section A3 of the General Exchange Guidebook for all ISDN and non-ISDN facilities terminated at the same premises. Primary rate channels associated with this option are designated as NAS Channels in paragraph B756D.

(T)

b. Voice calls may be completed to both ISDN and non-ISDN lines.

c. Data transmission on the B channel will be circuit switched at 64 Kbps within the switch and between ISDN compatible central offices. ISDN interconnection to non-ISDN equipped central offices may be potentially subjected to analog transmission or sub-rated to 56 Kbps.

d. The customer may choose to subscribe to additional non-exchange based services. Initial choices for these services will be WATS and 800 Service. The subscription to these services is in addition to the charges for MegaLink ISDN service.

(T)

5. Call-by-Call/Integrated Service Access Feature Capability - This feature will allow the customer to dynamically allocate the use of channels for the Primary Rate Access service. The customer may also choose voice or data transmission on a per call basis. In addition, the customer may also choose to subscribe to more services than channels and dynamically change the services in use.

6. Network Access and Usage Charges - Network Access for Primary Rate Access is based upon the type of service the customer desires. Exchange access is provided through the use of Network Access Service found in Section A3 of the General Exchange Guidebook. Customers electing WATS or 800 service will obtain service access in Section A19 of the General Exchange Guidebook.

(T)

C. Incoming Call Identification - This optional feature provides the customer with the number of the calling party. Incoming call identification is provided via the D Channel associated with incoming calls on a B channel(s) to a PBX.

(T)

D. MegaLink ISDN Packet Switched Data - This optional feature allows packet data to be transmitted up to 9.6 Kbps via a Basic Rate (BRI) OB+D Access Line. There is a limit of 12 MegaLink ISDN Packet Switched Data lines for each Primary Rate Interface activated.

(T)

#### B107.5.6 Rates and Charges

A. All usual and applicable Service Connection Charges and Nonrecurring Charges as specified in the General Exchange Guidebook and the Access Services Tariff apply to the activation, move or change of channel equivalents within MegaLink ISDN service packages as well as for installation of the basic system. Suspension of service is not permitted with MegaLink ISDN Primary Rate Access service.

(T)

B. A MegaLink ISDN Primary Rate Access Line is furnished between a Serving Wire Center and the customer's premises. Rates will be charged for each Primary Rate Access Line activated.
